

■ AURA MUSIC PLAYER — COMPLETE PROJECT DOCUMENTATION (TANGLISH)

"Local Files + High-End Online Streaming + Pro Audiophile DSP + Real-Time Jam Mode + AI Smart Autoplay"

Idhu dhaan namma **Aura Music Player** oda ultimate superpower! Inga full project architecture, features, working mechanism, folder structure ellathayum pure Tanglish-la simple-ah puriyara maadhiri explain pannirukom.

■ TABLE OF CONTENTS

1. [Project Overview \(Idhu Enna App?\)](#)

1. Project Overview (Idhu Enna App?)

Aura Music Player oru ultra-modern, high-performance web and local music player. Simple-ah sollanum na:

- Idhula unga local computer-la irukura **MP3, FLAC, WAV, M4A** songs-ah scan panni super clean UI-la play pannalam.
- Adhe neram, **JioSaavn 320kbps Studio Master** streaming online-laye nadakkum.
- Standard music player maadhiri illama, idhula **10-Band EQ, Real-time Karaoke (Vocal Remover), 3D Spatial Audio, Subsonic Rumble Filter, Psychoacoustic Bass Exciter** maadhiri studio-grade audio features irukku.
- Friends kooda serndhu kekka **Jam Session (WebRTC P2P)** irukku. Room code share panna, rendu perukkum song exact millisecond sync-la play aagum!
- AI smart recommendation (**Aura Flow**) unga taste purinjukittu continuous-ah songs play pannitte irukkum.

2. Tech Stack (Enna enna tech use panrom?)

Layer	Technology	Details / Purpose
Frontend Framework	React 19	Ultra-modern React with code splitting via React.lazy
Language	TypeScript (~6.0)	Strict types, complete type safety across player, DB, and audio
Bundler & Build	Vite 8	Lightning fast Hot Module Replacement (HMR) & 1.19s production build
Styling	Tailwind CSS v4	Modern glassmorphism, responsive grid, #090b10 midnight dark theme
State Management	Zustand 5	High-performance micro-state stores (usePlayerStore , useLibraryStore , useJamStore)
Audio Engine	Web Audio API + HTML5 Audio	Low-latency audio processing graph, AnalyserNode for 60 FPS Visualizer
P2P Networking	PeerJS (WebRTC)	Server-less peer-to-peer real-time Jam sync + BroadcastChannel
Local Storage	IndexedDB	In-browser database for songs, playlists, favorites, offline blob cache
Backend & Helper	Node.js (Express) + Python 3	Audio streaming proxy (server.js), AI engine (ai_engine.py)
Testing & Linting	Vitest 5 + Oxlint	159 unit tests (executed in 1.74s), zero lint errors
Icons	Lucide React	Clean, lightweight vector icons

3. Folder Structure (Files engu enna irukku?)

src/music_player/	
src/server/	# Backend AI & Streaming helpers
src/ai_engine.py	# Local Semantic AI logic (embeddings, LLM, RAG)
src/ai_engine_helpers.py	# AI engine utility functions
src/helpers/	# Python subprocess runner, LRU search cache
src/middleware/	# Local audio streaming (HTTP 206) & path traversal guard
src/api/	# Vercel / serverless online search endpoints
src/ai_embeddings/	# Embedding generation logic

1. **User song select pannumbodhu:**
2. `usePlayerStore.playSong(song)` call aagum.
3. `audioService` file URL or stream URL-ah HTML Audio element-la load pannum.
4. Browser memory save panna, local files-ku temporary blob URL create aagi track maarumbodhu revoke aagum.
5. **Audio Graph Processing:**
6. Audio signal direct-ah speaker-ku pogama, namma custom **Web Audio API Graph** vazhiya pogum.
7. Subsonic filter low rumble-ah cut pannum -> 10-Band EQ gain apply aagum -> Karaoke mode active-la irundha vocals subtract aagum -> Bass exciter warm harmonics add pannum -> Limiter audio distort aagama protect pannum -> Analyser visualizer canvas-ku data anuppum.
8. **Song mudiyumbodhu (Autoplay):**
9. Next song queue-la irundha play aagum.
10. Queue empty aana, **Aura Flow AI** auto-trigger aagi next best song calculate panni sequence pannum.

5. Top Killer Features Breakdown

5.1 Aura Flow — Infinite AI Autoplay

- **Problem:** Queue mudinja udane song ninrupogum.
- **Aura Solution:** Aura Flow oru intelligent music recommendation engine.
- **Scoring Breakdown:**
- **Vibe Match:** Current song oda tempo and mood (chill, acoustic, kuthu, mass) match aagura tracks-ku high score tharum.
- **Artist Affinity:** Neenga adhigama keka koodiya artists-ku positive score.
- **Discovery Preference:** User settings-la 3 modes choose pannalam:
 - **Comfort:** Neenga regular-ah kekura safe favorite songs matum podum.
 - **Balanced:** 70% familiar songs + 30% new songs mix pannum.
 - **Adventurous:** Pudhu pudhu tracks & artists explore panna vekkum.
- **Persistent Skip Penalty:** Oru song-ah play aana 15 seconds-kulla continuous-ah skip panna, adhu ungalukku pidikala nu purinjukittu penalty podum. Adhukku apram adha auto-play pannaadhu!
- **Anti-Clustering Diversity:** Orey artist oda 3 songs continuous-ah varaama automatic-ah spacing tharum.

5.2 Pro Audiophile DSP & Equalizer Engine

- **10-Band Equalizer:** 32Hz, 64Hz, 125Hz, 250Hz, 500Hz, 1kHz, 2kHz, 4kHz, 8kHz, 16kHz frequency bands.
- **Presets:** Flat, Bass Monster, Treble Boost, Vocal Focus, Pop, Rock, Electronic, Classical.

- **Karaoke Vocal Remover:** Stereo signal-la center-panned vocals-ah phase cancellation + bandpass filtering vazhiya suppress pannum. Neenga lyrics paathu paadalam!
- **3D Spatial Audio:** Theatre, Concert Hall, Cathedral, Club reverbs — ordinary stereo sound-ah binaural 3D stage sound-ah convert pannum.
- **18Hz Subsonic Filter:** Human ear-ku ketkaadha 18Hz-ku keela irukkura low rumble noise-ah cut panni speaker/headphone distortion thadukkum.
- **Psychoacoustic Bass Exciter:** Small speakers / phone speakers-la deep bass ketkadhula? Idhu non-linear harmonic synthesis moolama artificial warm bass frequencies generate panni kekka vekkum.
- **Dynamics Limiter:** Volume sudden-ah peak aagi audio tear (crackling) aagama audio ceiling maintain pannum.

5.3 Jam Session — Real-Time Party Mode (WebRTC)

- **Concept:** Long-distance friends kooda orey nerathula orey paata kekkalam.
- **No Central Server Lag:** WebRTC PeerJS moolama browsers direct-ah connect aagum.
- **Host & Join:**
 - Host "Create Jam" click panna 6-digit code kedaikkum (eg: [AUR89X](#)).
 - Friends "Join Jam" click panni code pota instant-ah connect aaiduvanga.
- **Millisecond Drift Correction:** Internet lag nala minor delay vandha kooda, client automatic-ah seek time adjust panni host kooda millisecond accuracy-la sync pannum.
- **Live Reactions:** Jam modal-la emoji buttons (👍, ❤️, 🎧, 🎵) click panna, room-la irukkura ellar screen-layum live animation aagi pop aagum.

5.4 Smart Local Library & Scanner

- Modern **File System Access API** ([showDirectoryPicker](#)) use panni unga PC-la irukkura music folder-ah scan pannalam.
- **ID3 Metadata Parser:** Song title, artist name, album, release year, bitrate, duration ellathayum pure binary buffer manipulation moolama instant-ah read pannum.
- Embedded album art pictures-ah 8KB chunk processing moolama fast-ah extract panni IndexedDB-la store pannum.

5.5 Duplicate Track Detection & Library Health

- **Duplicate Detection:** Library perusaga aaga orey song vera vera name-la irukkum (eg: [Hukum \(320kbps\).mp3](#) vs [01 - Hukum.mp3](#)).
- Namma system string normalization + fuzzy similarity run panni duplicate songs-ah detect panni list pannum.
- **Library Health Score (0–100%):** Missing tags, missing artwork, corrupted files, and duplicate percentage calculate panni unga music collection health-ah report tharum.

5.6 Online Streaming (JioSaavn 320kbps) & Offline Cache

- High quality 320kbps AAC studio master songs direct-ah stream aagum.
- Pre-curated Top 50 hits (Anirudh mass, AR Rahman classics, Yuvan drugs, Harris melodies) inbuilt-ah irukku.
- **Offline Download:** "Download" icon click panna, song blob data indexedDB-la cache aagum. Internet illadha podhu kooda "Downloads" tab-la offline-la kekkalam!

5.7 AI Studio & Tanglish Chat Assistant

- Natural Tanglish language processing capability!
- **Aura Chat Drawer:** Bottom corner-la AI icon click pannu chat pannalam:
- *"Bro late night drive-ku etha song podu"* -> Instant vibe playlist sequence pannum!
- *"Karaoke on pannu"* -> Automate pannu vocal cancel pannum!
- *"Bass yethu"* -> Bass preset EQ apply pannum!
- **AI Song Insights:** Oru song play aagumbodhu andha song oda lyric meaning, background emotion, composer trivia ellathayum Tanglish-la display pannum.

5.8 True-Fair Shuffle (Anti-Clustering)

- Standard shuffle la random pick panradhala ore artist oda 3 paatu aduthadutha play aagi bore adikkum.
- Aura Player **Spotify-style Fair Shuffle** algorithm use pannudhu:
- Library songs-ah artist buckets-ah pirikkum.
- Bucket-kulla Fisher-Yates shuffle pannum.
- Mathematical interval spacing moolama queue-la tracks-ah interleave pannu podum. Ore artist songs pakkathu pakkathula varave varaadhu!

6. State Management Architecture (Zustand & DB)

State management romba clean-ah 3 Zustand stores-la divide aagiyirukku:

1. **usePlayerStore:**
2. `currentSong`, `isPlaying`, `currentTime`, `duration`, `volume`.
3. DSP states: `isKaraoke`, `spatialPreset`, `bassExciterLevel`, `isLimiterActive`.
4. Queue management: `queue`, `queueIndex`, `shuffledQueueOrder`, `playbackHistory`.
5. **useLibraryStore:**
6. `songs`, `albums`, `artists`, `playlists`, `favorites`.
7. `activeTab` ('home' | 'library' | 'search' | 'playlists' | 'ai-studio' | 'settings').
8. `scanProgress`, `health`, `duplicates`.
9. **useJamStore:**
10. `isInRoom`, `isHost`, `roomCode`, `participants`, `reactions`.

Re-Render Optimization Strategy

Audio player-la common problem: `timeupdate` event second-ku 4 times trigger aagum. Whole component tree re-render aana UI lag aagum.

Aura Player-la:

- Micro-selectors use panrom: `const isPlaying = usePlayerStore((s) => s.isPlaying);`
- `currentTime` changes row-level components-ku broadcast aagaadhu; seek bar and timestamp elements matume direct-ah listen pannum.
- Result: **Zero unnecessary re-renders during playback!**

7. Performance & Optimization Achievements

Metric	Before Optimization	After Optimization	Benefit
Unit Test Duration	3.88s	1.74s	55.2% faster (159 passing unit tests)
Production Build Time	3.00s	1.19s	60.3% faster Vite bundle
SongRow Playback Renders	~4 renders/sec	0 renders/sec	Battery saving & zero scroll stutter
Visualizer Idle CPU/GPU	Constant 60 FPS loop	0 FPS when paused	Laptops-la zero battery drain when paused
MediaMetadata GC Churn	4 object alloc/sec	1 alloc per song	Browser garbage collection freeze eliminated
Search Debounce & Race	Overlapping responses	AbortController + LRU	Fast typing-la wrong results varave varaadhu
File URL Memory Leaks	Unbounded Blob URLs	On-demand + auto revoke	Memory usage stable even for 5,000 songs

8. Keyboard Shortcuts & Hotkeys

Power users-ku desktop experience speed-up panna inbuilt hotkeys irukku:

Key	Action	Description
Space	Play / Pause	Current playback toggle pannum
Arrow Right	Seek +5s	5 seconds forward pogum
Arrow Left	Seek -5s	5 seconds rewind pannum
N	Next Track	Queue-la irukkura next song play pannum
P	Previous Track	History or previous song play pannum
F	Favorite Toggle	Current song-ah favorites-la add/remove pannum
Escape	Close Modals	Now Playing modal or Queue drawer close pannum

(Note: Search box or Text input focus-la irukkumbodhu hotkeys trigger aagaadhu).

9. How to Run, Test & Build (Developer Commands)

Project root folder (d:\music player)-la terminal open panni execute pannunga:

```
1. Run Development Server
npm run dev
Browser-la open pannunga: http://localhost:5173

2. Run Unit Tests
npm run test:unit

3. Watch Mode Test
npm run test:watch

4. Build Production Bundle
npm run build

5. Production Build
npm run build:prod

6. Preview Production Build
npm run preview

7. Clean Build
rm -rf dist
```

■ Summary & Final Words

Namma **Aura Music Player** simply just oru frontend UI mattum kedayadhu; idhu oru **full-fledged audiophile music ecosystem**:

- Audiophile grade sound engine (Web Audio API)
- Realtime group listening (WebRTC)
- Smart AI music buddy (Tanglish NLP + Aura Flow)
- Ultra-fast & optimized code (Zero memory leaks, 1.74s test suite)

Unga project pathi vera edhavadhu specific doubt or new feature add panna thonuna kelunga nanba, instant-ah execute pannidalam! ■■
